EDUCATION

B.E. Computer Science Engineering (AI and Machine Learning) 2023 – 2027
Easwari Engineering College, Chennai CGPA: 8.63

Primary and Secondary Education (Class I to XII) 2010 – 2023
Kendriya Vidyalaya No. 1, Mangalore

EXPERIENCE

Software Engineering Intern Jun 2025 – Mid Jul 2025
Larsen and Toubro (L&T;), Chennai Python • Machine Learning • IoT

- Built Python-based ML pipeline using Scikit-learn to classify and predict sensor anomalies in industrial chiller systems, reducing fault detection time by ~40%.
- Engineered real-time IoT data ingestion layer processing live sensor feeds from 10+ devices, feeding a React.js dashboard used by the operations team for daily monitoring.
- Replaced manual system inspection with an automated ML-driven alert system, cutting average response time to equipment failures from hours to under 5 minutes.
- Delivered production-ready software within a 45-day internship, collaborating directly with mechanical and electrical engineers across 3 functional teams.

PROJECTS

SmartInvoice AI – Document Intelligence System Jan 2026 – Feb 2026
Personal Project Python • OCR • Machine Learning • NLP

- Designed and built an OCR-based invoice parsing pipeline in Python that extracts 15+ structured fields from unstructured PDFs with 89% field-level accuracy.
- Reduced document processing time by 70% over manual entry by automating extraction, validation, and output formatting across diverse invoice layouts.
- Implemented explainable confidence scoring per extracted field, enabling auditors to flag low-confidence outputs — directly applicable to compliance workflows in finance.

AI-Driven Chiller Valve Management System Jun 2025 – Mid Jul 2025
Larsen and Toubro (L&T;) Python • React.js • Machine Learning • IoT

- Developed an interactive React.js plant map rendering the real-time state of 20+ valves across a chiller network, giving engineers full visual control of hot and cold water flow.
- Built a virtual valve control interface with live state feedback, eliminating the need for on-site manual adjustments and reducing operator intervention by ~60%.
- Integrated IoT sensor streams displaying temperature, pressure, and flow data at under 2-second latency, enabling real-time automated control decisions.
- Replaced a fully manual valve management process with a remotely operable digital system, improving chiller energy efficiency and cutting operational overhead.

MedID – Patient Management Application May 2025 – Jun 2025
Personal Project JavaScript • IndexedDB • Chart.js • HTML5

- Built an offline-first patient management web app using IndexedDB that stores and retrieves medical records locally, maintaining full functionality with zero network dependency.
- Engineered a health report module using Chart.js that generates interactive visual summaries and exports PDF reports, reducing documentation time for doctors by ~50%.
- Implemented secure patient authentication and record management with client-side data validation, ensuring zero data loss across sessions without a backend server.

TECHNICAL SKILLS

Languages	Java, Python, JavaScript, SQL
Web Technologies	HTML5, CSS3, React.js, Node.js
ML / Data	Scikit-learn, Pandas, NumPy
Databases	MySQL
Spoken Languages	English, Hindi, Japanese (JLPT N4)

CERTIFICATIONS

- Oracle Certified Professional: Java SE 11 Developer, Oracle Corporation (2026)
- NPTEL: IoT and Privacy in Social Media, National Programme on Technology Enhanced Learning (2025)
